

SUMMER  
2021

## **Bicycle-Line**

**For many cycling enthusiasts, 1987 is the year of Stephen Roche, the Irish rider who was able to win the Giro, the Tour de France and World Championships in the same year, a feat which only the great Eddy Merckx was able to achieve. For us it is also the year Bicycle Line was born, which started its history in cycling thanks to the passion and experience of its founder, Gastone Coghetto. Today, 30 years later, with the contribution of the new generations, this story continues and points to new and important goals.**

**The research into new fabrics and technologies, the ever-expanding study of ergonomic dynamics and the ongoing collaboration with athletes of various levels to identify their different needs, represent the strengths of Bicycle Line to offer cycling apparel that can improve performance with resolute Italian style and design.**

**From the R&D lab to the style office, from tailoring to production, from garment control to final packaging, Bicycle Line manages the whole production chain, ensuring the quality and reliability needed for technical clothes that meet the chief requirements of lightness, breathability, endurance, comfort and aerodynamics.**

**“In the end, it’s through this process that we find the answers. Each collection is just a stage for us. Every goal is just an intermediate sprint. Our escape that started in 1987 is still ongoing. We know we can count on a solid team and a group that follows and supports us: our customers.”**

001 black

# TIR H

BL44870

Technical bib with pocket

001 black

## Size

S-M, L-XL, XXL

## Elasticity

### Possible uses of TIR-H

- MTB / E - BIKE and Gravel use
  - MTB / city bike use to go to work or for a non-demanding bike trip with non-technical clothing
  - Cross-country skiing, such as an elastic bib and an object holder during sports without interfering with the wide movement of the skier.
  - Alpine skiing, always as a bib to support the trousers and as a container for documents and more.
  - Mountain walks, snowshoeing, ski roll, etc.
  - Even more
- The fixing clips on the trousers are made of highly resistant Pom material. It's easy to use them on different models of trousers/baggy shorts and they guarantee excellent grip during demanding outings.
  - To preserve the integrity of the fabric of the bibs and the functionality of the various plastic parts such as closures and clips, it is better to leave clips and length adjusters open when the product is not in use.
  - We recommend washing the product in warm water up to 30 ° by hand and using mild detergents. We do not recommend washing in the washing machine because the plastic parts could be damaged during the washing cycles. During washing, the pocket would remain better closed to prevent the Velcro from damaging the fabric of the bib or other items washed together.

### Technical features

- Particularly elastic fabric, comfortable to use, breathable and durable.
- The TIR H pocket is removable and can be positioned at the front or back according to your needs
- The size of the pocket is 20 cm wide and 16.5 cm high with the possibility to increase the load capacity in the depth.
- The pocket is closed by a Velcro tab and allows a quick opening even with one hand if the pocket is positioned in the front of the TIR H.
- The pocket is made of a waterproof material, the objects inside the pocket will be preserved in case of light or medium rain and also from body perspiration. We suggest however to be careful in case of rain and to make sure that the velcro tab is well closed.
- There are the logos BL and TIR H in reflective material that increase the visibility of the product in low light conditions.

[See the size chart \(p. 179\)](#)

# ***TECHNOLOGY***

---

## Technology

### Pads

The saddle represents the biggest contact and friction point between the cyclist and the mechanical medium. For this reason, the pad plays a fundamental role in the construction of the shorts, to provide protection, support, stability, comfort and fit. BL uses different types of chamois that adapt to different conformations, uses and situations.

#### Ergonomics

Of vital importance are the positioning of the different densities and thicknesses according accurate anthropometric parameters and a design that allows the chamois to adapt to the anatomy of the cyclist.

#### Alliviating perineal area

Differentiated densities to protect and uphold differently parts of the body with different characteristics.

## Road Performance Space

### Man / Woman

Producer  
Cytech

#### Technology

Long distance pad featuring different foam combinations and varied densities, delivering superior perineal support and increasing protection along the pelvic track. Seamless structure for best comfort. This construction allows for best protection and flexibility with a slim profile and greater stability in saddle.

#### Man products

Technology  
Designed for long distance riders on road or mtb to offer maximum performance in terms of protection, support and comfort. With perforated and rooted gel in ischial and perineal area, for a better support on the pressure points, this pad also features perforated gel and a very soft microfiber upper fabric, good elasticity, high breathability, soft touch and quick drying. Minimal volume construction technology thanks to the Carving System and premolded wings offers excellent comfort during pedaling.

### Power Plus

#### Man / Woman

Producer  
Berenis

Technology  
Design to offer best results on protection, support and comfort on road bike and mtb during medium distances. Made using high quality microfiber fabric, with antibacterial properties and great elasticity, this pad is also incredibly soft to the touch and breathable.

- Elastic, it follows pedalling movements
- Anti-bacterial protection
- Optimal moisture transfer
- Ideal both on the road and on a mountain bike

## Technology

### Pads

#### Fast

##### Technology

Pad with medium density and padding. The external material offers complete anti-bacterial protection and optimal moisture transfer. Anatomical shape and bi-elasticity guarantee additional comfort.

## Fitting

Please note that these charts are indicative only. Sizes and measurements may vary according to physical structure and product fit. The fitting is tight and it's optimized for the road cycling position. The MTB items have a relax fitting, as explained in the specific descriptions. To follow, the description of the three types of fitting.

Comfort  
Loose fit that allows maximum freedom of movement, suitable for off-road rides.

Action  
Tight fit suitable for all cyclists who want to combine the technicality of the product with comfort.

Performance  
Very tight fit suitable for cyclists who want to feel the garment like a second skin.
